

Tcl Support for Growl

About Tcl Support

The Tcl binding for Growl is a simple Objective-C extension which provides the Tcl command `growl`. Currently it features full Unicode support. It also supports notification icons. This binding is very much a work in progress; see the Todo section for missing features.

Installation

The following commands will install the binding into `/Library/Tcl/growl1.0:`

```
cd Bindings/tcl
sudo make install
```

Usage

The following Tcl commands will post a basic Growl notification. Try it out!

```
package require growl
growl register appName "list of notification types" iconFilename
growl post type title desc "optional icon"
```
